

DMARC protocol enables you to receive two types of reports: aggregate reports and failure (forensic) reports. These reports serve different purposes. EasyDMARC's AI-powered platform automatically analyzes aggregate reports and sends you important notifications and alerts.

In this report, you can see four parts - DMARC Compliant, Non-Compliant, Unknown/Threats, and Forwarded sections. Each of these sections represents sources for which all messages failed/passed both SPF or/and DKIM and therefore failed/passed DMARC. Any source that appears here is either a legitimate sender that needs to be configured in your DNS or not a legitimate sender and should not be sending on your behalf.

Status Report

Sent email types by dates

DMARC Compliant

Under the DMARC Compliant section, you can find all configured legitimate sources.

SENDING DOMAIN	TOTAL VOLUME	SPF PASS	DKIM PASS
prodpainter.pro	1	100% <div></div>	100% <div></div>

SENDING SOURCE	VOLUME	SPF PASS	DKIM PASS
unknown	1	100% <div></div>	100% <div></div>

Non-Compliant

Under the Non-Compliant section of your EasyDMARCDashboard, you can find all the non-configured sending sources.

Threat/Unknown

The Unknown/Threats section shows a list of source IPs that have sent emails for your domain but lack an SPF record or DKIM signature for your domain.

Forwarded

Under the Forwarded tab you can find all emails that your recipients have forwarded to another recipient.
